

SEBO Felix Brochure

Learn Everything About the SEBO Felix Vacuum

DESIGNED FOR CARPETS AND HARD FLOORS

The stylish FELIX offers all the flexibility of a canister vacuum in an upright configuration! It has a "flex" neck with amazing maneuverability, an ultra-modern filtration system, a detachable suction unit that becomes a hand-held vacuum, and an instant-use suction hose. The power head deep cleans carpets or its brush can be shut off to clean delicate rugs. The FELIX also has a parquet brush for hard floors, or it can morph into a polisher using the DISCO head. The brush roller is removable, and a light illuminates if it is set too high or is worn, and it shuts off if jammed.

Instant-use Suction Hose

The integrated instant-use suction hose is always ready! Just pull it out to clean corners, crevices or furniture. Two on-board tools and a range of optional attachments can be fitted to the hose, such as a wand for cleaning hard-to-reach areas or a nine- FELIX 2 foot extension hose, which creates a total hose length of 15 feet...perfect for cleaning stairs.

A Flat-to-the-floor 6-inch Profile

The vacuum's low profile makes cleaning under furniture and beds easy!

Two Power Head Widths with One-sided Edge Cleaning

The FELIX 1 Premium model is 12 inches wide with a 10 1/2-inch cleaning path. The FELIX 2 Premium -Ice Blue is 14 3/4 inches wide with a 13-inch cleaning path.

Sebo Felix Information

Multi-surface Cleaning Capabilities

With a power brush for carpets and a parquet brush for hard floors, the FELIX provides all the cleaning flexibility of a canister vacuum! It also morphs into a hard floor polisher, by adding a SEBO DISCO head.

Four-level Manual Brush Height

◆FELIX Premium◆ Model Includes Power Head, Two On-board Tools and Parquet Brush

Along with a commercial- quality power head, the FELIX Premium comes standard with a crevice tool, upholstery nozzle and a parquet brush.

◆FELIX Kombi◆ Model Includes Combination Nozzle and Two On-board Tools

The FELIX Kombi does not have a power head.

Adjustment

The brush can be adjusted up or down for optimal cleaning effectiveness.

Brush Obstruction Light with Automatic Brush Shut Off

If an obstruction jams the brush roller, an orange warning light on the power head illuminates and the brush roller stops spinning. This feature prevents the belts from breaking and protects the motor and carpet from damage.

Incorrect Height Setting or Worn Brush Light

When the brush height is set too high for optimal cleaning or when the brush roller should be replaced because of wear, an orange warning light on the power head remains illuminated during use. The light shuts off when the condition is corrected.

Easy Brush Removal and Cleaning

Cleaning hair or other debris from the brush roller or replacing it when its bristles are worn is quick and easy, and no tools are required! This feature ensures consistently effective brush agitation of the carpet pile.

Manual and Automatic Brush Shut Off

The FELIX can gently clean delicate rugs or hard floors because the brush roller can be manually switched off, but suction remains on, by pressing the green illuminated on/off button on the power head cover. Also, the brush roller automatically shuts off when the suction hose is removed from its housing port or when the handle is in its upright locked position.

Variable Suction Control on Handle with Soft Start

The user can select the suction power needed, from curtains to carpet. And its gradual power-up extends motor life.

Three-level Adjustable Handle

This feature provides compact

Instead, it includes a combination nozzle (a straight suction nozzle for hard floors and rugs), crevice tool and upholstery nozzle. The Kombi can accommodate a FELIX Premium power head, which can be purchased separately.

Thirty-one Foot Cord with Rotating Quick-release Hook

It is easy to quickly unwind the cord by rotating the hook!

Easy Maintenance

The clog removal door and brush roller are easy to access on the power head.

Innovative Exhaust Filter, Design and Functionality

Behind the stylish surface hides an ultra-modern S-class exhaust micro filter that not only provides excellent filtration, but it also absorbs motor noise, resulting in extremely quiet operation.

storage, maneuverability when suction unit is detached, and easy adjustment to user height requirements.

Full Bag or Clog Indicator

When a full bag, a clog in the airflow pathway, or an excessively dirty micro filter is detected, an indicator gauge on the bag housing lid fills with orange color and an airflow bypass valve opens, to prevent overheating and motor damage from a lack of adequate airflow.

Detachable Suction Unit Creates a Hand-held Portable Vacuum

By removing its power head, the FELIX instantly transforms from an upright floor vacuum into a handheld

portable vacuum, ideal for cleaning stairs, upholstery and car interiors. It can be easily carried using its alternative side handle or its shoulder strap attachment.

Superb Maneuverability

A unique 180-degree turning swivel neck offers superb maneuverability around and under furniture.

Optional Attachments

Wall & Floor Brush #1325HG

Hand-held Turbo Brush #6179DA

Radiator Brush #1496DG

Flat Upholstery Nozzle #1090HG

20" Extension Wand #1084HG

9-Foot Extension Hose #1495AM

Dusting Brush #1387DG

Exhaust Micro Filter #7095ER 01/02/03/04

Motor Filter #7013ER

12" Brush Roller #5010AM

15" Brush Roller #2838AM

The Standard Features of All Sebo Upright and Canister Vacuums

Designed and Manufactured in Germany
 Legendary quality, reliability and performance make SEBO vacuums the choice of cleaning professionals and household users throughout the world.

Both S-class and HEPA Filters are Available
 S-class filters come standard on all SEBO vacuums, and HEPA filters are an option available for most models. They both remove 99.97% of particles down to 0.3 microns in size and 100% of particles of one micron and above.

Save Money! Sebo's Last for Years and Extend Carpet Life!

If properly maintained, SEBO vacuums save ordinary residential users hundreds of dollars by providing excellent performance for ten to fifteen years or more, and their deep cleaning power brush technology extends the life of carpets. Typical vacuums perform poorly, even when new, and usually do not last beyond two years. So six or seven ❖disposable vacuums❖ must be purchased during the average life expectancy of just one SEBO machine.

Five-year Warranty Coverage

All SEBO models include a five-year warranty on the motor and all non-wear parts and a five-year warranty on labor charges. The AUTOMATIC X vacuums include a lifetime warranty on the belts.

Effective Pet Hair Removal

All SEBO vacuums easily remove pet hair!

Remarkably Quiet Operation

Intelligent design and high quality motors combine to provide amazingly quiet vacuums.

Protective Rubber Coated Wheels

Sebo's wheels protect all floor surfaces and provide smooth maneuverability.

Changing Bags is Easy and Clean

SEBO bags take just a few seconds to change, and a cap keeps dust sealed inside.

SEBO Micro filters Ensure Continuously Strong Suction Performance

They are also long lasting, inexpensive and easy to change in seconds. Choose S-class or HEPA filters...either type of filtration is an excellent choice!

Effective Filtration Requires a Tightly Sealed Vacuum

Dirty air, which flows through a vacuum, can only be filtered completely if it does not escape into the room through seams or seals in the

For comparison, 100 microns is the diameter of a human hair.

Excellent for Users With Allergies or Asthma

The British Allergy Foundation recommends SEBO filters.

Sebo's THREE STEP FILTRATION SYSTEM:

Step One. Bags are Better!

Top fill, three and four layer bags are an integral part of Sebo's filtration system because they hold virtually all dirt captured by the vacuum, which improves the effectiveness and useful life of the micro filters. They also ensure continuously strong suction because dirt enters from the top, deposits at the bottom, accumulates upward, and air exits through the sides, which allows unimpeded airflow as they fill to capacity. And they can be sealed when full, so no dust can escape into the air during disposal.

In contrast, without bags to hold nearly all the captured dirt, the micro filters on bagless vacuums quickly clog from excessive dirt buildup and must be replaced often or a loss of suction and cleaning effectiveness will occur. In addition, dust and other allergens become airborne when emptying the bagless dirt containers. Lastly, bagless vacuum micro filters are expensive, usually costing more than a multiyear supply of SEBO filter bags.

Step Two. S-class Micro Filters

S-class (S = ❖Schwebstoff❖ = airborne particles) filters are made from electrostatically charged microfiber material, which attracts and captures dust particles from the airflow of the vacuum. The S-class Standard requires filters to absorb greater than 99.9% of particles down to 0.3 microns in diameter. Their advantages are a relatively open texture that allows smoother airflow for better suction performance, a long-lasting life expectancy, and they typically cost less than HEPA filters. A charcoal S-class micro filter, designed for odor absorption, is also available for most models.

machine. This is why all SEBO vacuums have tight seals throughout.

Many vacuum companies with high filtration claims are actually quoting specifications made by the manufacturer of the filter material, as measured in the laboratory, not the filtration effectiveness of the vacuum itself while operating. Whether or not dirty air can escape through leaks in the body of the machine is not considered. The filtration effectiveness of SEBO vacuums is tested while they operate.

Step Two. HEPA Micro filters (Optional)

HEPA (High Efficiency Particulate Air) filters remove a minimum of 99.97% of all airborne particulate matter down to 0.3 microns in diameter. Because these filters use small grid like structures to capture dust particles, dirt buildup clogs the airflow pathway sooner than what is expected from S-class filters.

However, Sebo's HEPA filters are sold along with four layer Ultra bags, which provide highly effective filtration before the airflow goes through the HEPA filter, greatly increasing its life expectancy and reducing the potential for diminished air flow from blockages of the filter material.

Step Three. Exhaust Filter

The exhaust filter cleans the air emitted by the vacuum motor.
